Voters Party (International)

There is need to reform the Politics itself, not the Political Leaders

The problems which our country faces today exist more or less in the other countries also. Some of these problems instead of diminishing during the last 60 years have rather grown up. There is no doubt that development has taken place in the country but the pace of development has remained very tardy in the rural areas whereas rural areas have developed very fast. The growing discrepancies between the two in terms of development have made rural people bereft of enjoying the fruit of development. This situation is causing frustration among the people. But this frustration is not pushing the people towards solution to the problems but they are heading towards violence and fake solution. They are being trapped by those who instead of questing the solution to these problems are just crying and presenting a fake solution to the real problems by criticising leaders and bureaucrats.

Several heads of the Parties, the Governments at centre and the states and many of the officials are already in favour of continuing economic slavery for the development, but even the intellectuals who present fake solution to the development also consider that economic slavery is essential for development. They will prefer making 80 percent people slave for the next 1000 years and sacrificing interest of such a huge population at the alter of fictitious development. Evidently, the people presenting unreal solution by way of severely criticising the leaders and the bureaucrats are themselves a big problem for the society.

Most of the conservative nationalists not only of India but of the entire world also belong to same category. In 1950 the space created in the name of independent country and government in India is proving small because the number of members in the family take solution in place of creating space for the family members in the house is pasting them like tiles of the wall of the house. They are trying to make the family members understand that the house building structure of the government is heritage of their ancestors, which should not be repaired, status should be

maintained and the people associated with the central government and the state government should be allowed to enjoy this property. The demand put forth by the grown up members of the family that some new floors must be added to accommodate them is improper and selfish one as bringing a change in the heritage and identity is nothing but spoiling one's culture only. Structural change in the heritage is equivalent to pawn the honour, self-respect and independence of the family. The people in power thought it better to enhance price-rise, unemployment and poverty instead of making any structural change so that the people at large may turn bereft of money and the population thus will automatically come down. Hence, there is no need to undertake the repair work of the houses for the growing population. There is a need to create the feeling of patriotism among the people and they are required to be taught to save the house against vagaries of climate anyhow at the cost of their comfort.

All the Governments irrespective to their party affiliation adopted the same tactics during the last 60 years. In such a situation there is nothing uncommon if the question is raised as to why the people should not rebel against dictatorship of the rich in the name of democracy when the maximum number of the people is to be treated as slaves and why the ongoing dictatorship of the rich should be legitimized by casting votes when every party after widening of its base is to be captured by the rich. Why the party presidents and their supporters who exploit democracy and favour feudalism should not be politically boycotted. Why the demand for reservation in Parliament, Legislative Assemblies and jobs for the poors and middle classes shouldn't be raised.

When the 80 percent people who are economically weak are never in a position to win elections, then why these 80 percent people shouldn't take initiatives action to create a separate system of governance, judiciary, currency etc for themselves. Why all the facilities like salary, pension allowance travel by rail, bus and air should be given to the leaders only, why these facilities shouldn't be extended to the voters as well. The economic status of the children was used to be depended on their parents in the monarch but why the same system of law of successions for unlimited period should be allowed to continue even in democracy. How long the human beings will be treated as slaves within the boundaries of their countries when every item is allowed to move freely all over the world after Dunkel agreement came into being in 1994.

Today the new generation is seeking freedom in this Internet Era as they are supposed to exhibit their talent all over the world. They are required to be liberated from the boundaries of the nations. But the irony is that the power is still in the hands of those conservative people who had read the books fifty years ago and who are unaware of the challenges existing of the present.

They have been suppressing the document related to Political reforms signed by 137 Members of Parliament since 2006, which has potential to change the whole world. They are not even ready to hold a debate on it, how they can implement the same. 6 May 2008 was scheduled for holding debate on it but parliament was prorogued one day before.

After going through these experiences this book titled 'Political Reforms' talks of not merely changing the driver i.e. government of the vehicle, but suggests for changing the engine itself. Bullock cart has been given the shape of aeroplane. Therefore, the proposed political reforms presented in this book may appear to some people too big to be implemented. The author wants to request such people who consider manufacturing and operating aeroplane a very big tasks to donate at least one Rupee with good wishes to those who are involved in manufacturing and buying aeroplanes and to stop sending narrow minded persons by casting votes in their constituencies to the institutions which have been established for the purpose of executing some great work. The people are advised to join the caravan struggling hard to travel free of cost in the aeroplane after it comes into being.

As heart ailment can not be cured by consuming Septran tablet like wise, the problems instituting the country, villages and house holds from generation to generation can not be solved just by criticising the government, the leaders and the bureaucrat's officers. The people making such criticism are behaving like that doctor who advises the patients suffering from heart disease not to follow the advice of a big doctor for undergoing surgery. Such doctor insists upon them to follow his advice only. He says that heart surgery is a very costly and big work, it is Utopian idea, it is not a feasible solution, it can be performed only by the doctors of the other countries, this is not possible for this country and therefore pain relieving tablets should be consumed and the doctors must be changed after every five years if they don't get cured... Such critics should go through this book and thereafter they should think again with cool mind as to whether presenting fake solution to genuine problem just for the sake of appearing more pragmatic among the people is justified.

This book enlightens about the measures for mending the politics instead of criticising the politicians and the bureaucrats for the problems ahead them. The people who are assigned the responsibilities of implementing those measures are working on different fore in a very organized manner.

The author tells about the one sided love shown by the voters party towards him. Though he is not a member of this Party, yet the party has appointed him as Policy Director. The author has accepted the responsibility of policy Director with this condition that other Parties should also be allowed to reap the benefits of his direction if they desire so. The voters party doesn't have any objection in this regard. This is greatness of the voters party which has tried to mitigate

untouchability prevailing among the parties by making this provision in its constitution. This party has made an attempt to find out the ways of solving the various kinds of class conflicts through dialogue instead of passing through electoral animosity and adopting the means of violence.

The price of this book should be necessarily fixed low since there is a plan to circulate this book in every household. For this reason only the measures to mend politics have been explained in very few words. The people who are willing to work on reforms or those who have any doubt or reservation on any measure of reforms are advised to go through those books also especially “Towards global changes which have been referred at different places in this book.” An appeal to this effect is also made to the readers that undertaking big task may not be possible for everyone but supporting the cause and dreaming of a big work doesn't cost anything, because only a big thought can bring greatness in one's family, relatives and country.

Hence, readers are requested to join their hands in converting fake democracy prevailing in the country and the world into a genuine one by way of circulating this book to every household and shop a request is also made to them get associate in the mission of changing the world after discarding their affinity with their Parties they belong to so that everyone gets a chance to reach the courtyard of power and every voter gains prosperity.

**Poverty, illiteracy, Malnutrition, Population and unemployment- Problems
five and solution one.**

Some problems prevailing in the country and the world are existing since long. The current politics is unable to solve these problems. These problems get aggravated further after every effort is made towards finding a solution. A conclusion can be drawn from this that continuance of these problems is a deliberate and willful attempt of the current politics or the solution to these problems is beyond the capability of the current politics and the state. The people criticize the leaders and the parties for not finding solution to these problems. This sequence of criticism is going on for the last 60 years. The problems of the households, villages and the country are growing day by day.

The problems of poverty, illiteracy, malnutrition, population and unemployment are caused by only one malady which is known as the malady of division of money. In economic term it is called problem of distribution or unjust distribution. Poverty will continue till the problem of distributing money is not solved. The children of the poor families can't acquire education despite the schools being located in nearby areas. These uneducated children after attaining youthfulness will definitely procreate a number of children who will be regarded as somewhat surplus children by some intellectuals. The families of such children are normally not in a position to provide wholesome diet and milk to them in want of money. As a result of this, they suffer malnutrition. Malnutrition causes diseases in such poor families and whatever money is earned by them is diverted to the hospitals. The conclusion drawn by this situation suggests that poverty can be removed if some cash is pumped into these families without imposing any precondition of labourhood on them. With money in hand every labour will come into position for bargaining about the rate of payment in lieu of his or her labour. With this economic slavery will come to an end. With disappearance of poverty and slavery, each member of every family will come in a position to attain education easily. Thus they will be able to percept the problem of over population and with this perception there will be check on population increase and theoretically it will be possible for everyone to get employment and money on account of this. (To know the reasons of giving money to everyone without undertaking any work in detail please read the book entitled 'Bring Votership Remove Poverty, Price Rs 5/- or the Votership as proposed by 137 members of parliament in parliament of India, Price Rs 50/-)

Execution of work more through machines both in factories and farm is the only measure to manufacture the items of the best quality and sell them at the cheapest rates in the market. The human labour should be paid minimum amount. The people will accept the offer of low paid job only when majority of them might be facing the problem of money crunch. Now the question is how poverty can be removed when the government is deliberately willing to keep people bereft of money. Government's deliberate move to continue with the poverty is the very reason of economic slavery. Due to policy of continuing the slavery system Government prefers grains to get rotten and throw the same into oceans instead of distributing it free of cost among the poors. The Supreme Court had ordered in September 2010 to distribute grains lying in the godowns, which may get rotten. The Prime Minister had approved this order due to this policy only.

Employing least number of persons and paying them bare minimum wage is not just a fun for the employers rather it is a compulsion for them. on account of the world Trade laws (1994) this compulsion is not confined only to the country

level it has spread to the international level also. Any move initiating in one country affect the other necessarily.

When billionaires of every country all over the world coming together got the Free Trade Laws for the goods enacted by exerting pressures on the rulers of different countries, then the labourers also must be made entitled to sell their labour and undertake employment in the country which may pay them maximum. The car motor manufacturers all over the world have got this right through the laws related to world Trade organization.

“Laws should treat all the people equally”.

Under this policy it has become essential that the labourers should be accorded freedom to visit any country of the world. For granting this freedom doing away with the Visa created laws has become quite essential. Campaigning for initiating political reforms is must for doing away with this law.

There is proverb ‘Good Mind Good Fiend’ which is often referred in the villages. In terms of what is demonstration effect contemporary Political Science it is known as Demonstration effect. In plain language it is called ‘habit’ of copying other. For the reason of this habit of the rulers of the countries unemployment, Poverty and economic slavery are the big problems not only of India but of the entire world today. The people in power in any country start imitating the other countries without caring for the capacity of their country to bear the expenditure to be incurred on such imitation. Money thus spent on this doesn’t come from their pockets. The poors have to pay for this. These problems will continue till the leaders and the bureaucrats who are in the habit of copying others exist. Political reforms have become quite essential for withdrawing the power to rule and admired from their hands so that these problems are removed and 70 percent population of the country who are afflicted with these problems may get relief. (For knowing about Demonstration effect Read the book-)

When the root cause of all the problems such as poverty, unemployment, lack of education, disease is unjust distribution of money then it becomes necessary to consider about the appropriateness of distribution of money so made. Now it has been detected that chromosomes existing in the cells are the basic cause for the difference in tendencies and ideologies and body organs of different persons with such findings it doesn’t hold any meaning whether distribution of money is beneficial or harmful. The best solution to this controversy in this fact that this percentage of total quantum of blood. Present in a human body existing in blood veins amount equal to should be fixing the amount equivalent to the percentage of blood available in blood veins of the total quantum of blood present in a human body in the quota meant for those who oppose distribution of money among each individual so that they maybe able to spend that amount. Similarly the amount equal to the percentage of blood that exists in blood arteries should be

fixed for the quota of those who are willing to distribute money among every individual. Distribution of money in this manner will be a healthy proposition for all the the three component i.e. People, Society and Nature. (For knowing the relating between blood and viewpoint of an individual in detail Read JANOPNISHAD, Price Rs 200.)

CORRUPTION AND TERRORISM: GRASS ROOT GOVERNMENT IS THE ONLY SOLUTION

People are of the view that every country is more or less affected by corruption. Though China is not free from corruption, yet stern laws were enacted and implemented there to prevent it. It could be possible there only because elections are not held and the people in power don't require to be reach before the industrialists and businessmen for political donation. The industrialists and businessmen don't place any condition before them of commuting corruption in lieu of political donation.

All over the world wherever fake democracy is going on industrialists and businessmen blackmail the Presidents of the political parties after giving them political donations. They compel the leaders to indulge in corruption. The leaders who don't fall in their line have to be ousted from the corridors of politics. The leaders who don't take corruption as evil only remain staying in politics. The corrupted leaders allure the bureaucrats to get tinged in corruption. The very industrialists and businessmen who corrupt leaders and bureaucrats get the news related to their corruption published and telecast in News Papers and TV channels of their choice. By doing so the industrials and the businessmen succeed in creating their image as if they were fighting corruption in reality. They create such an atmosphere as if they were clean. In this situation the so called intellectuals engage themselves in such kind of publicity in the society that everyone working in social and political sectors is corrupt and industrialists are clean. This is like the example where a person who is himself a culprit of making a widow pregnant assumes the role of a judge and awards death penalty to that widow. There are only two options to bring an improvement in such situation elections are banned as is the case in the communist countries or alternatively anyone shouldn't be allowed to attain such richness that he or she acquires the power to purchase leaders, Ministers and bureaucrats. For this it has become essential to cap a ceiling one's riches.

Global Police is the only solution

The constitution of United Nations Organisation (UNO) is also responsible for protection being given to corruption. It is very difficult for anyone to save oneself after commilting corruption if any country of the world doesn't shelter the corrupt businessmen, industrialists, leaders and bureaucrats. It is not possible for any country to prevent corruption at its own when many countries of the world

have enacted specific laws in the name of sovereignty to provide protection to the corrupt people and their money.

There are many countries like Switzerland in the world which are involved in securing, providing banking facility and enhancing the amount of money. These countries don't provide any information about the bank accounts in this regard in the name of security of the Account holder. Even if some information is passed on, there is no common global Policing and auditing system to know the veracity of information so passed on: Recently when America sought certain information using threatening language, some information was provided to it out of fear of its mighty force at its disposal.

The government of the country which is inflicted with evil of corruption can do nothing if the country like Switzerland doesn't divulge information to the rest of the world and continue to provide protection to economic offenders of the country concerned and in this way the offenders money power increases by leaps and bound. The police can seize the money of the person if this income is found disproportionate to his income within the country itself but the Police cannot do anything if the money earned through corrupt means is deposited abroad. Obviously in absence of global Police the fear of bonafide government will not prevailing upon the bogus people who enjoy power in real sense. Following situation will continue prevail till genuine people are not handed over the key to rule.

- 1) Economic offenders of one country will continue to get shelter in another.
- 2) The ceiling cannot be applied on the wealth of the riche.
- 3) The bereacrate Judges industrialists- businessmen, Public Representatives, chiefs of the political parties will continue to indulge in corrupt practices and thus others will be forced to imitate them. Not only that those wrong doers will also appear launching agitation against corruption.
- 4) There will be changes in the government and political parties and agitation against corruption will also be launched as has been taking place for the last 60 years but corruption will not come to an end.

The author is of the view that terrorist acts of the terrorists can be dealt with by ways and means of the Army only. But we should contemplate over finding political solution to it so that the youths of new generation are not inspired by terrorism.. We should not feel perturbed if the solution requires drastic changes in the political systems and principles.

Bringing some changes in the ruling system is a better option than the one under which the whole world is destined to live under terror. Such changes may

instill confidence among the new generation that they can get justice in this system also.

They should be persuaded not to resort to terrorism which may take their lives as well as the lives of other. We should think about that aspect of terrorism also which is adopted by the governments themselves on account of demonstration effect. The aspect is also to be looked into that the number of people killed in terroristic incidents in the whole world doesn't touch the figure of even lakh but around 50 crore people become victims of economic terrorism every year.

**It is also necessary
to focus on the economic
terrorism**

No one can entertain the appeal of following non-violence made by a lion crushing a deer in its jaw. Unjust attitude of the government of various countries provides moral support to terrorism. The various countries of the world will have to refine the system after adopting a constitution based on justice. It is must to penalize those who are found violating constitution.

Selling of arms and weapons to various countries and making huge profits by some of the countries can't be held justified. These weapons are the ultimate strength of terrorists who are trained and asked to infiltrate into one another's domain of different countries. The countries which provide training to the terrorists to operate these weapons are equally guilty and so are the companies which manufacture these weapons and sell them. Even including governments of these countries deserve punishment alongwith the terrorists.

As a matter of fact sovereignty has been wrongly defined all over the world and that is why the governments of the different countries indulge themselves in the same practice which is followed by the terrorists. These government are not held guilty in the name of sovereignty. Terrorist organization came to exist as a reaction against injustice, atrocities and violence perpetrated by these governments. Today there is a need of such people all over the world, who can assume the role of mediators between these governments and the terrorists. Such people are required to persuade both the governments and the terrorist outfits to discard violent path. Giving up the path of the global government can assume the role of madiator between the governments of the countries and terrorists. Discard of violence is in everybody's interest. This is in fact the fight of egos. Fight of egos always needs mediators. This is obligatory on the part of the governments to create space for these mediators who in turn are also required to initiate the work of mediation keeping their frustration at bay. Only grassroot governments can assume this role of mediators.

To conclude it can be said that eradication of terrorism is not possible till the governments of the various countries all over the world shade off their egos and path of violence and agree to form global police global courts etc. and above all global government. This may be a big task for the common man but this is not a difficult task for the government which considers this a difficult task doesn't deserve to rule.

Global Government : Big work – Small ways

To initiate for forming a national government at the world forum is the easiest for the countries like India where the concept of treating for the well – being of the entire world has been shaping the very thinking of the people at large and this country has potential to become world teacher.

This is a matter of consideration that the many efforts have been made in the past for assuming the role of global government but in most of the cases the intention behind doing so was to become dictator of the world with aspiration to make the other countries as their slaves. But the people of India since ancient times never cherished any will to rule over the world. They always cherished to assume the responsibilities as father and mother. In this country right from the very beginning the Earth is treated as mother. This feeling guides every man and woman of India. This feeling is in their genes and their thinking is influenced by this sentiment. Hence working towards nationalizing the whole world is the easiest task for the countries like India. Initiating for the global government is easier for the government of India because this has expertise in finding a solution between contradictions of various kinds. Both devotees and critics of Lord Rama, the people with love for their native language and the people having detest for the same, believers of god and atheists, the people who treat the whole world as one family and the people having great sense of nepotism, the people of oriental thought and the people of oxidental thought and capitalists and communists exist side by side in India here.

India as a mini world

In India both rightists and leftists are powerful. There is a large number of persons here who are capable of shaping the characters of people and there is also a good number of such persons who can build the Nation. There are people here who are even ready to sacrifice their lives for the well being of others and there are also

people who care only for their benefit even in the worst circumstances. Both believers and non believers of paganism Development supporters and Environmental activists, people of frugal thinking and followers of consumerism, people working for poverty alleviation and people praising the worthiness of poverty, people with fair complexion and people with dark complexion, people accustomed to live in plain and people liking in hilly areas, very rich and very poor, original habitants and the people coming from abroad exist here side by side and even climate turns very hot and very cold at times. The people belonging to almost every religion and community are present here. Many of religions have so many castes, sub-castes and clans. India as a nation is not being guided by any particular religion, caste, creed or class. Any one language is not dominant here. For the reasons of having so much diversities and so many contradictions India has been stated as union of states in the constitution of India. It has not been addressed as a country. The status of the states is like those of Nation States. Government of India is, in fact, a common government of the Nation states. That is why India is not just a country rather it is a mini world. The population of India constitutes 7th part of the total population of the world. Government of India supports the global government. It means 1/7th of the world population agreed to the proposal of forming global government. There are around 210 countries in the world. So, it should be taken as if 30 countries of the world agreed to the proposal of forming global government. Obviously the rulers of India know how to take contradictions. India is full of contradictions, varied ideologies, and varied philosophy. There is no dearth of enemies also in the country.

On account of retrenchment, unemployment is on rise and since social security exist nowhere in the countries like India, the majority of the people are trapped in economic crunch. Economic crunch is destroying their health and a large number of people are adopting crime or committing suicide. Government of India is not in a position to mobilize necessary amount to compensate unemployed and to provide social security. For this amount global government is needed. So all initiatives towards forming global government are to be taken not by any other countries but by India. India must initiate for this in view of its huge number of labourers also.

Who will struggle for global Government

There is no doubt that the poors of all countries will get united to achieve the source of their income. The number of such people is around 500 crore which is 5 times more that that of the population of India. The youths of today are willing to exchange their hearts with one another, to work for the joint mission, to start joint

ventures all around the world. But in absence of global government their aspirations are destined to die midway. The governments of the countries are barriers like villains between the two lovers. Two nations are like mountains between the friends, walls between the entrepreneurs and like rivers between the job givers and job seekers. The people running the governments ask the citizens to get confined in their own countries as if countries were jails and they are being taught to love with the prison house in the name of patriotism. It is interesting to note that this check and balance is applicable to the people of lower class and middle class only. The rich segments of every country is completely unaffected by this kind of restriction. In their view it is a crime to be part of the poors and the middle class. Thus it can be said that right to visit abroad is the need of not only middle class people who constitute the population 137 crore but also of the 350 crore population of lower class worldwide.

Since the right to visit abroad can't take a concrete shape without forming a global government so not only 137 crore population but 87 crore people will fight jointly to form the global government. There is only need to come above one's frustration and constitute a world organization.

In the coming days the population of high middle class is likely to increase worldwide from which tourism will also flourish. The number of activists working for constituting global government will grow proportionately to increasing number of tourists. With coming into being of the global government anybody may feel at home and secured anywhere in the world. Today one is required to spend Rs 2 lakh for the world tourism and with the existence of the global government one will be required to spend barely. 50 thousand for this purpose.

Since the global government is not required to compete with anyother, so every voters will get votership amount will get votership amount every month without any difficulty. Hence, the people of lower income group of at least 160 countries of the world will join the mission of forming global government. This will create the most powerful vote Bank. This vote Bank constitutes the population of at least 450 crore worldwide i.e. 4 times more than India's and 3.5 times more than China's population. The average income per capita of the world is Rs 36,000 per month. Every citizen of the world may get Rs 18000 per month from the global government even if he or she is supposed to pay half of the amount is income tax. Even if 10th part of the amount is sent in the account of the voter from the global government, it comes to Rs 3600 per month. Everyone of the low income group all over the world join the move of forming global government after looking such a good amount. The amount of Votership may attract even the lower medium income group. This amount will not only agitate them but also persuade them to lead the people of lower group. Such people are spread all over the world. The people after getting leadership will be able to constitute a powerful Vote Bank in every country

so much so that the government of the country doesn't have any other option than resigning if it is not agreed to the formation of the global government and thus the class of reformists will occupy the power.

Moderate cost of tourism and international security measure attract middle class who are willing to send their children to the country for undertaking employment where the scope of earning is the highest. The present rule and procedure of visa passport, narrow definition of nationalism and absence of global government frustrates their wish. Few people are able to send wards to the place of their choice. After global government coming into existence cent-percent people of the entire world will be able to fulfil their dream. They will even be able to send their children to the place of their choice for attaining education with opening of these avenues the middle class will get ready to join the movement for formation of the global government and lead it. They will even become the source of money.

Middle class will get cheap tourism and education abroad

Proposed votership alone may attract neither higher middle class nor higher class. But definitely moderate expenditures to be made on tourism, international security and international judicial system for the business will attract higher middle class because this class has some capital with them and they are willing to participate in small business and prefer to do so in the country where cheap labour is available for their firms and they are in search of the place where they may get the best price for their products. The traders of the whole world will not mind bearing the expenditures to be incurred on formation of the global government which in turn will provide such a big relief to them. Constituting a global government may not be a difficult task at all when the traders of the world will bear the expenditures the middle class will provide leadership and the lower class will provide manpower.

Apart from lower, middle and higher classes there is one class which consists of the people who are of stoic character in general and possess a typical kind of mindset and are quite different from the classes formed on the basis of physique, community, religion and culture. They are known differently in different languages. They are called the people with liberal mindset, the people having big heart, the people of high thinking and the people of cosmopolitan outlook etc.

Giving power to the gentlemen is possible only under the global government

These high thinking people are capable of reducing tension and unrest to a greater extent caused due to mutual disputes and clashes of interest among the governments and the people at large in different countries provided sovereignty of the world is dissociated from the hands of the different governments of the countries and a global government is formed. The number of such people is around 8 crore all over the world if their percentage is even considered just one percent of the total population of the world. These people will work day and night for the formation of global government if they are asked to do so. Such people are spread all over the world. A worldwide campaign is needed for move towards formation of global government and searching such kinds of people.

The Nature has produced such people to provide nourishment to the world. These guardians of the world have become destitute, helpless, unarmed, poor and mute in absence of a global government. These people having natural talent are the judges of the world but the courts meant for them in real sense are occupied by the fake judges and the power to instruct the police has been snatched from their hands. They are not interested in money making because they consider the whole world as their own and for this reason they are poor. These people don't get opportunity to meet one another and they deserve the honour of philosophers but they are treated as lunatic instead by the people at large. In fact, only they are capable of establishing genuine democracy in the world and a true ruler exists among them only.

To make a search for the true ruler and handing over the power has become unavoidable to save the world from the third world war and from becoming a desert and desolate planet. In case this is not done, any small incident may prove explosive to pave the way for the atomic war which will wipe out the entire human world. After that decay we will not be there any more even to rumors or repent for our act. To know about possibility of global government in detail read the book 'The world towards global change' Price- Rs 100/-.

From U.N.O. to U.N.G.

There are around 220 countries in the world. Imposition of global government on them is like making a jump to reach fifth floor from the first floor of a building. One can't reach there in this manner, one can reach there through the steps of stair only. Likewise for the formation of a global government two different kinds of government are required to be formed in between the government of the countries and the global government.

**The Policies and Programmes of Political Reforms
(Policies and Programmes of the organizations associated with world change mission)**

1) Implementing the policy of providing employment through vocation in place of physical labour with hands with a view to provide employment without removing machines and to undertake development work for the country as well as every citizen. Disposal of work through machines has become a compulsion for every country due to the laws relating to the world trade. The people talking of giving employment to every hand have a little International knowledge. Mind based employment through vocation will provide development opportunity to every individual. It is a proven fact that the caste creed and community developed and flourished which worked through mind and those depending on manual labour lagged behind. This was the very reason for the backwardness of India because most of the intellectual, officers, leaders and journalists are of this view firmly that it is essential to slave 80 percent people for undertaking development and they reserved mind based work for their own wards and children and awarded manual work for the children to the poor.

2) **Imposition of condition to work to attain richness and removal of condition to work to earn livelihood.**

In case of a person purchases a house of Rs one crore, the amount becomes double in just three to four years. The condition to work is not imposed on the house owner when he makes a profit of Rs one crore but for giving just Rs. 100 to the poor citizens of the country the condition to work is imposed on them through the laws of MNREGA etc. This irony can be removed by way of giving votership right. This will remove the condition to work for earning livelihood and one will have to work necessarily for earning Rs. one crore.

3) Enacting laws relating to reversal right with a view to prevent children from doing injustice to other parents, to check a brother from exploiting economically another one and the global government which is like father for the countries may get its share in money collected through sovereignty and taxes earned by the countries which are like brothers for one another. The present laws take care of proving share to the children in the properties of the parents but there is no provision for giving share to parents in their children's properties. This causes humiliating and helpless lives for the old parents in most of the families. This system also causes economic exploitation to such brothers who works alongwith the parents for the progress of a talented brother. Such family is like company in which all the brothers and the parents are partners and all of them work unitedly for the progress of the talented brother whose success is the result of joint efforts of the family. If this company fails in attaining success and incurs losses it is treated everybody's loss but in case of success, all the profits are reaped only by the talented brother and his children. Formation of rightwing laws will pave the way for depositing children's income in parent's account and after deduction on the pattern of income tax the remaining amount will be sent back to the children's accounts. The amount will deducted proportionately from children's income but parental property will be divided equally among the children on the basis of law of succession. This system will compensate and provide income in the profit of the family to those children who had taken every pain for the progress of a talented brother. The countries became poor in their attempts for encouraging the talented brothers to excel just on the line of brothers becoming poor in their attempts for helping the talented brother. As providing economic justice to the brothers exaction of laws for giving reversal rights to parents is essential so is the case with the countries for which formation of global government and giving some shares to the same by the member countries is compulsory.

4) **Theto power to the provincial government for protecting civilization and culture** of all the communities of the world and giving guarantee to live with their faith and it is incumbent of all the communication to work with all their might they have for forming three new governments within the governments of their countries they belong to. For this it is essential to provide such a privilege to the provincial governments like veto power so that the chief Minister of a Province may be empowered to impose restriction on any TV channel, new paper programme. This right which is proposed to be provided to the chief Ministers of Provinces may be called Theto Power on the line of veto power.

5) **Providing right to vote to the Block Pramukhs (Presidents) alongwith M.Ps for electing directly the Prime Minister of the country-** will associate the Post of Prime Minister with development of Blocks and will make this Post some what more democratic. This is now a proven fact that theory of 'Demonstration Effect' of Economics is equally applicable to Political Science also, so it is never possible for the government of the country to undertake the development of the villages and their families. After this discovery, it has become mandatory for allotting the work to a government which may be capable of undertaking that work after amending the agenda of the government under this policy responsibility to develop blocks, districts and villages, families and individuals may be assigned respectively to the Prime Minister, Chief Ministers and the three separate governments to be formed above the country and below the U.N.O. under the theory of vertical separation of power for electing the chiefs of the first government the second government and the third government above the country voting rights must be given respectively to the gram chiefs, family chiefs and adult individuals. Amendments to this effect in system of governance will require an international agreement for which the Central government should engage the Ministry of External affairs.

Programmes for the development of villages

6) **Providing right to vote to the village chiefs and the members of the village committee for electing directly the Prime Minister of Asian Countries** – will pave the way for development of villages, not merely slogans for development. The Central government prefers spending money on beautification of big cities only for the reasons of the theory of 'Demonstration Effect' of political Science, thus no option is left other than forming a separate government for the villages. The villages will get 20 times more allocation of funds in case a common government for the south Asian countries is formed on the line of European Union. Formation of the common government for India and its neighbour countries will

abate the pain of division of Partition and with this the problem of communal violence will be solved for ever.

The programmes for unity and integrity of India.

7. **Restricting the successors of the Nehru family from contesting election of any kind-** will pave the way for awarding the status of 'Deshpal' to the successor of this family which has become symbol of unity and integrity of India so that casting an aspersion on the honour and security of this family on account of political rivalries may come to an end. For the reasons of contesting elections in the electoral politics this family is made a subject of abuse and criticism which is good neither for the family and or for the unity and integrity of the country. The new post of 'Deshpal' will be equivalent to that of the president of India. All the rights and Privileges necessary for maintaining unity and integrity of the country will be vested to the post. This proposal is under consideration and has been issued for the public opinion.

Programmes for the participation of lower class in governance

8. **Providing reservation in the 60 percent parliamentary constituencies to the poors who constitute 60 percent population** will provide an opportunity to the poors who lead the lives of slavery to participate in the law making process as the SC/ST gets. Thus, they will be able to assist in passing laws in the interest of the poor and weaker sections.

The present parliament shade only crocodile tears for them with reservation of this kind for the poors the presidents of the Political parties will issue tickets to the poor workers of the parties under compulsion and doors of parliament and state Legislatures will come open for the poor workers. Today the poor workers riding on bicycles labour for the parties but election tickets are issued to the rich ones who ride cars.

Programmes for reforming Reservation

9) **Providing inclusive reservation to SC/ST and providing jobs to the children of the poor Dalit families-** will give maximum benefits of reservation to the families for which provision of reservation has been made in the constitution, which in turn pave the way for all SC/ST families to join the main stream of the nation. 3 percent of the vacancies should go in favour of the rich among Dalits

paying income tax and remaining vacancies should be filled in through the people belonging to poor Dalit families after amending reservation policy. This move should be initiated with the vacancies of the third and the Fourth class so that any post in these categories doesn't remain vacant in want of availability of the suitable candidates among the poor families. The children of the rich among them who study in Private and English schools grab all the reserved vacancies. Due to this the members of few handful Dalit families have been reaping the benefits of reservation from generation to generation.

The programmes for participation of middle class in the governance

10. **Providing reservation over 30 percent Parliamentary constituencies to the Middle class which constitutes 30 percent population** may force parliament to work in their favour and may open the doors of Parliament and State Legislatures for the workers of the parties belonging to this class. Reservation of 30 percent seats for the people who are neither income tax payers nor eligible for BPL cards will compel the presidents of the political parties to give party tickets to the workers belonging to middle class. The people belonging to this class can be identified by the laws relating to property. The neighbours of the property holders should be allowed alongwith the government to acquire the property at 20 percent more rate of the value declared by the owners in their affidavits. The present laws provide this right only to government. The ministers and the officers of the government by taking bribes allow black money to be retained with them.

Programmes for ending economic slavery

1. **Giving voterships in cash to voters every month (interest on the common funds of voters, interest and Dearness allowance)** to end economic slavery of the country and every individual may live with dignity and honour (For knowing about the proposed votership presented in parliament please read bring votership, remove poverty, votership, the central pillar democracy (price Rs 60/-).

2. **Giving right to free travel by train** will provide an opportunity to every individual to live like a human being instead of a plant. The individual may come in contact with more and more persons and thus his brain will develop. Present laws are such that the rich travel in trains free of cost but the poor are asked to pay.

3. **Providing right to free travel by air** (once in life) can provide every old person to feel about the wonderful invention of man before his or her death. The

level of such person who cherishes wish to travel by air can be raised and his conscience can take a vertical shapes from ground zero.

4. **Providing right to visit abroad (only on the basis of votership card)** to every individual may provide a chance to convert this right which was once upon the time during the past happened to be a natural right into a constitutional and fundamental right. With the help of money power and international laws of world trade the rich are extracting all the benefits today and today in this era of internet the same right is must for the poors also as to be poor is not a crime. The human being and the earth was not conceived by man. The relation between the in like mother and children laws relating to visa is in fact like preventing children from meeting their mother. Preventing human being in this manner is wrong when laws have been enacted for sending commodities freely anywhere in the world. This freedom has been granted to the people of 27 European countries. It has become proved that "Visa laws provide security" why can this freedom not be granted to European countries.

12. Providing right to get currency note in proportion to votes obtained in the election by the candidates contesting Parliamentary election may solve the problem of political donation, insure the votership right of the voter make democracy as people's democracy by liberating the same from the trap billionaires provide income to the gentle to work for political and social reform and they may reach the corridor of power. After giving right to votership to the voters, the amount for contesting elections can be arranged by imposing tax on the votership amount. one month amount of votership can be given to them through enacting law in this regard and this will be insure the votership amount also so that the voters will continue to get amount regularly.

13. Starting salary-allowance for the people by undertaking social and political work will pave the way for providing employment to those who are being retrenched by the companies. It is confusion of the industrialists to retrench workers and set up new companies with least number of workers on account of laws of the world trade organization, so the workers retrenched by the companies can get work in social and political organizations only. Till now such work was not treated as payable and this concept is the biggest reason for corruption with the provisions of paying to the office bearers of the parties the gentle will outnumber the visious one. This will make the social elements powerful and anti social elements weak and effeminate, corruption will be checked and crime and extremism taking shape in reaction to economic injustice and scarcity will also come to an end.

14. **Giving right to multiparty membership to the voters-** may weaken the power of parties to divide the society with this the voters can manage different kinds of work to get materialized through different parties and the voters will become the best judge for taking the decision in democracy. The parties assure the members to manage even the tasks which are not possible. The members even after coming know the truth are supposed to develop relations with the other parties. Present laws also prevent them from doing so. Hence, the condition for not maintaining relations with the other parties should be confined to the office bearers only. A members going in the meeting of the leaders of the other parties and listening to the speeches is not considered legally and morally correct. Thus members of parties become mentally blocked and quality of democracy deteriorates. The leaders not having ability to comprehend the other parties succeed in dividing society by creating hatred among the various components with the help of money and power.

15. Cancelling the laws relating to whip will save the party presidents from becoming puppets of the hands of rich and the parliamentarians and legislative members will work for the benefits of the public also alongwith working for the benefits of the party president.

16. Preventing the children of billionaires from becoming billionaires without expensing anything after democratizing inheritance- can draw richness line like that of poverty line so that anyone may not become so powerful that he with the help of money power may make party presidents as has slaves. The governance and the administration is now being guided by the will of the billionaires because of power of giving unlimited donation. Only corrupt and commission agents get grace of such persons thus the gentle persons are coming out of politics gradually. This is the main reason for failure of all efforts made for checking corruption.

17. Amending the registration laws of parties and companies may implement the above programmes discussed at no. 5 and no 6 and may create various parties for working from the level of block to the world. In this era of common market system of the world and internet developing the quality of specialization among the parties on the line medical sector is the greatest demand of today. Confining the government to limited levels by amending registration laws relating to the parties and the companies is in the interest of the parties and the companies as the parties can be desisted from giving assurance of managing work which is outside their domain.

18. Reforming the laws of property to may pave the way for repaying foreign loan for reducing economic disparity an for utilizing indigenous properties maximum and for abating blackmoney. For this purpose the formulae as enshrined in the above programmed relating to property tax will be applied.

Individual development programmed for the families and citizens

19. Giving to the voters for casting their votes even during the elections for the leaders of the other countries may implement the above programmes discussed at serial no 5 and 6 threat on the lives of Army can be reduced and the amount saved through preventing quarters among the neighbours in deposited in the poors accounts.

Today conservative Nation states by perpetuating hatred between the countries unnecessarily ask them to purchase weapons from the money meant for providing foods to the poors. After holding elections the power to rule the countries wil continue to go in the hands of the conservative nationalists but the power will slop into the hads of gentle and good people Automatically if global government is formed even if in one fourth half or full measure .

20. Providing rights to the people to become public representatives of the voters of another countries and to undertake jobs in any country of their choice – with a view to execute the aforesaid programmes given at serial no 5, 6 and 19 so that the global governance may be brought into existence to seen the global economy created on account of world trade laws. This will provide an opportunity to like those of technical persons. For the reasons of free trade laws doctors, engineers, industrialists and trades are getting an opportunity to show their talents all over the world but the people having social and political calibers are confined to the boundries of their countries they belong to this is one of the reasons for continuance of poverty slavery international exploitation and the threat of the third world war.

21. providing rights to the heads of the families to vote for the direct election of the Prime Minister of Prarashtra i.d. half world – with a view to execute the Programmes discussed above at serial Nos 5,6, ,19 and 20 and a government may be duly formed for the development of the families. For the reasons of demonstration effects as explained at serial no 5 this responsibility can be assigned to the government at the level of half world since it is beyond the capability of the government at country level to undertake development of the families In this era of internet the world has shrunked to the level of nation therefore it is appropriated to call half of the world as Prarashtra. When the government of the half world will

assume the responsibilities of nourishing and developing of the families of every country the government at country level will be happily agree to part with a share of its revenue and bestow an element of sovereignty to the government of the world.

22. Providing right to the self declared global voters to vote for choosing the Prime Minister of the whole world- with a view to implement the programmed discussed at serial no 5,6,,19,20 and 21 and gentle and good may come to power and jungle rule prevailing even at world level on the line of country level may be brought to an end. The president of the most the countries are terrorized from the way Saddam Hussain the Iraqui President was got hanged at the hands of the American President Georg Bush and all of them are honouring the wishes of American President in place of the general will of the people of their countries . in such a situation it has become mandatory to borm a common and compellent government for the whole world which can discipline American President or any such power which commits injustice with any other country president or any individual for its vested interest such trade benefits or for its whims and fancies.

23. GAPP agreement for according the status of united National Government UNG to the United Nation organization with a view to execute programmes enshrined at serial no 5,6, 19, 20, 21 and 22 and to write the constitution of UNO in such a way that it may help in achieving the goals of UNO. The goal of UNO has taken a shape like a satellite which cannot be send into space in want of launcher. It has become mandatory today to ament the constitution of UNO to assign the responsibility of united government of the whole world, to change its nomenclature to improve its agenda and create many branches of its headquarters so that this may protect the common interest of and undertake the responsibility of working for the individual development of the people of the whole world.

24. Working for GAPP agreement at International level to make State structures more democratic – to create such world governance based on democracy which will be guided by people's will not by will of billionaires. With coming into world economic order and thechinques like internet laws relating to constitution of parliaments governments and courts the governments appear working but with regard to working for the public their condition has become like that of the paralysed persons who though can ulter few words yet cannot undertake any work. This situation may push the countries toward the third world war. The laws relating to visa and citizenship have reached the stage of such insane fellow who is unable to distinguish between different animals like cat, pig buffalow and elephant but considers all of them as one and the same because of their black colour. Somenew

laws such as conditional south Asian citizenship conditional world citizenship south Asian parliament and world parliament, South Asian Governemnt

2. Providing rights to the people to become public representatives of the voters of another countries and to undertake jobs in any country of their choice- with a view of execute the aforesaid programmed givben at serial no 5, 6 and 19 so that the global governance may be brought into existence to run the global economy and global government, Laws relating to south Asian court and world court. The benefits of five tier government system (State, Country—Nation-half world-world) will be extend to be people in place of to tier governmental system after coming all these laws into existence. The wave some of the floors are added to the building after growing of the number of the family, in the same manner after increase in world population it has became necessary to erupt fifth floor after upgrading the two story building of the state. The modification in the building in the state is possible only when the agreement at international level to this effect is made and the above programmes at the serial nos 5,6, 19,20,22 and 23 are executed.

25. Please refer to the book manifesto of the voters party to know the formula of political reforms in details (available in Hindi and English Price Rs 40)
